In the event of stoppage, the tug renders assistance in getting the vessel under way as often as may be necessary. In all other cases tug hire is invoiced according to the tariff rates annexed to the regulations. Shipowners are authorized to have their vessels towed or convoyed by their own tugs, or tugs on hire, under their entire responsibility. Such tugs must be approved by the Canal Co. Ships towed or convoyed by approved tugs pay 50c per ton as towage dues; but such approved tugs, whenever they tow or convoy vessels belonging to their proper owners are free of any tax. TARIFF OF AUSTRIA-HUNGARY.

NOTE.—*While it is our usual practice to revise the various tariffs up to December* 31, *it has not in this case been practicable to do so, owing to the fact that Austria-Hungary is a hostile nation. The revision has taken place up to August* 1914. *Changes made since the outbreak of war have not been incorporated.*

The Monetary unit is the Kron divided into 100 heller = 10d.

Austria-Hungary has adopted the metrical system.

IMPORTANT.—All countries entitled to "Most Favoured Nation" treatment may claim "Conventional Tariff" rates, where it is lower than the "General" rates.

A Commercial Convention between Austria-Hungary and Roumania, modifying the Convention of 1893, came into force on September 1st, 1910, and is to remain in operation until December, 1917.

Commercial Treaties between Austria-Hungary and Servia, Austria-Hungary and Montenegro, have been ratified and will remain in operation until December 31st, 1917.

A Commercial Treaty signed Oct. 12, 1912, grants most favoured nation treatment to Japan till Dec. 31, 1917.

SPECIAL CUSTOMS REGULATIONS.—Import duties by weight are levied on the gross weight (1) in cases where it is so prescribed in the tariff, and (2) in case of goods subject to a duty not exceeding 7 kr. 50 h. per 100 kilogs. Goods dutiable on gross weight are indicated in the schedules by the letter *g*. By gross weight is understood the weight including the ordinary and special packing used for the preservation and security of the goods. Fluids are generally dutiable with their receptacles.

In other cases duty is levied on net weight of goods. The net weight is not, as a rule, actually ascertained, but calculated by deducting from the gross weight a certain percentage proportion differing according to the nature of the article and of the receptacles. The exterior receptacles of goods dutiable on gross weight, such as casks, cases, baskets, sacks, &c., are dutiable as the goods they contain; exterior receptacles of goods dutiable on net weight are admitted free of duty. Duty shall be levied on the net weight of mineral oils.

Exterior receptacles such as metal cylinders, flasks, and casks for which no tare rates are fixed, are dutiable as their contents if not subject to a higher duty than the contents.

Interior receptacles subject to a higher duty than the goods they contain are dutiable with the contents, provided such interior receptacles are not dutiable at a higher rate than 50 kr. per 100 kilogs.

Interior receptacles subject to a lower duty than the goods they contain are, as a rule, assessed at the same rate as the goods; but the person paying duty may claim separate assessment.

Internal (small) packing (Einlagen) of goods is not removed in ascertaining the net weight.

	(*e*) Flat stitch tissues of all kinds	—	260 00

NOTE.—Under this heading are included all flat stitch tissues (even dyed, printed or woven in colours, without regard to the condition or quality of the yarns used for their manufacture), worked with figures resembling embroidery on which the weft threads of the pattern lie flush with the rest of the texture, at least altogether on one side and partly on the other. They are distinguished from embroideries by the fact that the figure threads always bind the same threads of the foundation tissue when the figure is turned over and appear to be woven with it, which is not the case with embroideries. Flat stitch tissues of which the foundation tissue is made of yarn of No. 100 English or less may be assessed for duty according to the nature of the foundation tissue if the threads of the pattern have been removed from the cutting required for the ascertainment of the weight of the main tissue.

NOTE TO NOS. 189 TO 192.—In the case of tissues which are alternately open and close woven, duty will be calculated upon the average total number of threads. The average total number of threads will be obtained by counting the threads of both warp and weft between any two regularly recurring points in the design (counting from repeat to repeat), and by reducing the number of threads so obtained to an average of 5 millimetres, adding together the product for warp and weft. In the case of tissues with double or twisted threads, the single threads should be counted. No account is taken of fractional parts in establishing the net result of the calculation.

	(*b*) Other	—	215 00
	NOTE.—Mercerised tissues or tissues made wholly or partly of mercerised yarn, as also velvet and ribbons of the same kind, are subject to a duty of 18 kronen per 100 kilogs. in addition to the duties to which they are already respectively liable	18 00	18 00

In calculating the Conventional surtax, the conventional rates applying to the different tissues are to be taken into consideration.

GENERAL NOTES TO CLASS XXXVIII.—1. For the purposes of this tariff malleable (wrought) iron includes steel, soft cast iron and cast steel.

2. "Worked" articles as opposed to "rough" are divided into three classes as regards iron wares. (Conventionalised.)

These divisions are considered to be as follows, so far as in the case of special numbers in this class separate degrees of working are not expressly named nor other exceptions fixed :

(*a*) The following are considered as being ordinarily worked : all articles scoured, pierced, bored, or with cut screw threads, and all articles wholly or partly filed, or with the rough cut off, or turned, sandpapered, planed, smoothed or roughly painted ; and all iron parts riveted, screwed, and subsequently put together in a similar manner, so far as they are not included under (*b*) and (*c*) by reason of further working. (Conventionalised.)

On the other hand, the removal of casting or moulding seams by chiselling, grinding, whether or not by emery wheel, filing, or knocking off, smoothing broken surfaces, removing runners, knobs, &c., due to casting, and, in the case of cast steel, roughly scouring for the purpose of testing for freedom from flaws, are not to be considered as working.

Cast steel roughly scoured for the purpose of testing for freedom from flaws is treated as crude cast steel only when it is proved that the scoured side requires still another process before the completion of the article.

This proof may take the form :

1. Of a defacing of the scoured side (by chiselling or by reduction of a transverse section) so that a further process of manufacture is manifestly indispensable.
2. Of official investigation.

In the absence of proof, roughly scoured cast steel is only to be admitted as crude on the ground of permission for admittance for use in machine factories or machine work shops.

(*b*) The following are considered as being finely worked : all articles wholly or partly coated with tin, zinc, lead, copper, or brass, oxidised, finely coated, varnished, lacquered, painted, bronzed, or enamelled. (Conventionalised.)

(*c*) The following are considered as being very finely worked : all articles polished, engraved, nickelled, or plated with copper, copper alloys, or aluminium. (Conventionalised.)

So far as special regulations do not apply in the tariff, very finely worked articles are liable to a surtax of 50 p.c. on the duty leviable on the articles concerned. If in the case of the articles concerned special rates are provided for ordinary and fine working, the 50 p.c. surtax is to be calculated on the rate provided for the fine working.

So far as special regulations do not apply in the tariff, very finely worked articles are liable to a surtax on the duty leviable on the articles concerned of 35 p.c. for polished wares,

and 50 p.c. for engraved or nickelled wares and for wares plated with copper, copper alloys, or aluminium. If in the case of the articles concerned special rates are provided for ordinary and fine working, the 50 p.c. surtax is to be calculated on the rate provided for the fine working.

In calculating the surtaxes in the case of Conventional treatment, the duties under Convention are to be taken as basis.

ADDITIONAL REMARKS TO THE ABOVE GENERAL NOTE.—The provisions of the " General Note to the Import Tariff " will be modified as follows in the case of the tariff treatment of toys :

The accessories serving for the putting together of the separate component parts of toys, such as wires, hinges, cramps, twine, thread, string, little pieces of tissue, strips of paper, and the like, also insignificant accessories of fine or very fine materials, are without effect on the tariff treatment, except in the case of the wooden toys of No. 355*a*, which, on account of such accessories, or on account of their combination with common materials, fall under No. 355*b*.

In accordance with the above-mentioned provision, therefore, the following, for example, are without effect on the classification :

Small strips and trifling accessories of silk or lace ; occasional pieces of " leonisch " wire or thread ; occasional artificial flowers on dressed dolls or doll furniture, strips of lace on the curtains of dolls' houses ; small bands for the ornamentation of small figures of animals ; threads, strings, and small bands for working mechanical dolls ; simple cords of textile threads with tassels for children's toy trumpets, braces for toy drums, strings for the support of the separate keys of glass or metal harmonicas ; small wheels of iron or metal attached to animals mounted on runners ; single component parts (even though ornamented or nickelled) of iron or base metals, *e.g.*, little doors on iron cooking ranges of sheet brass, copper, &c. ; small bells of nickelled sheet brass for woolly animals, leaden wheels for mechanical sheet metal toys ; strips of leather or oil cloth attached to toy horses in imitation of harness ; tails and manes of textile materials or fur on toy animals ; paper sheets, even stitched together, attached to boxes of bricks ; also the pictures pasted on to small boxes of toys.

Birds of wood, paper, &c., with ordinary birds' feathers, are dutiable as toys in combination with fine materials.

Dolls and dolls' heads belonging to Nos. 282*c*, 299, 300*d*, 318, 342*b*, 355*d*, 388*d*, 424*b*, 426*c*, 486, and 522, in combination with imitation wig-makers' wares of materials other than human hair	—	per 100 kilogs. 100 00

The Government is empowered to convert *ad valorem* duties into specific duties, and is gradually doing so.

IMPORTANT CHANGES.—The process of converting *ad valorem* into specific duties has already taken place as follows: Shawls and scarves of wool, pure or mixed; carpets and table covers of wool, or in which wool predominates in weight; tissues of cotton weighing less than 3 kilogrammes per 100 square metres; and matches, were superseded in July and August, 1911, by specific duties. In the same way, the *ad valorem* duties on sauces, linoleum and oilcloths, perfumed or toilet soaps, yarns prepared for retail sale and caps, carpets of jute mixed with wool, jute predominating, have been converted into specific rates of duty from the 1st January, 1912, as regards sauces, from the 1st March, 1912, as regards oilcloth, from the 1st June, 1912, as regards soaps, and from the 1st September, 1912, as regards carpets of jute and wool. In the same way the *ad valorem* duties on (*a*) certain cotton and woollen tissues have been superseded by specific duties as from 1st January, 1913, 1st March, 1913, and 1st April, 1913; (*b*) other categories of woollen tissues and cotton table covers, tapestry, trimmings and ribbons, and hosiery, from July 1st, 1913, Aug. 1, 1913, and Sept. 1, 1913, respectively. During 1914 the following specific duties came into effect in place of previous *ad valorem* rates: (*a*) from Jan. 1 certain groceries and dried fruits, Nos. 22 and 25; capsules of tin and other metals, No. 54; (*b*) from May 1, automobiles and motor cycles, No. 70. The width of 25 mm. is measured from the centre of the space between the first counted thread and the thread which precedes it.
